Web Hosting

### Solutions

- **Virtual Servers**
- **Dedicated Servers**
- **Cloud Services**

New Wave NetConnect, LLC, dba ChicagoVPS.net has been providing a vast array of virtualized hosting solutions for small business and personal users since 2009. Their focus on low density (not overloading) and a high quality customer service experience has helped empower their strong growth.

Focusing on virtualized grid redundancy and the cloud's inherent redundancy, ChicagoVPS.net offers a completely turn-key, highly available and financially practical solution for users who require the security a virtual private server offers. As the transition from a shared hosting environment to compartmentalization continues (container based virtualization) ChicagoVPS.net stands primed to capture a greater share of the market.

ChicagoVPS.net offers two uniquely different hosting platforms to suit the needs of all types of users. Their OpenVZ offering provides a lower cost, Linux only option for customers looking for security and value. ChicagoVPS.net's more expensive platform runs Xen, which supports Linux and Windows and provides the ultimate in security, performance and reliability. Just recently ChicagoVPS.net has begun selling dedicated server solutions for clients who require completely dedicated resources.

“We only accept the best for our customers – with that mindset ColoCrossing was the obvious choice”

Chris Fabozzi, Managing Partner  
New Wave NetConnect, LLC

“ColoCrossing has helped us grow by providing the best network we’ve ever used. It’s also clear that they take care of existing customers, ChicagoVPS started with 1 dedicated server years ago and they were always sensitive to our needs. They never treated us like we were too small to matter. Today we have almost 20 servers and growing.”

ChicagoVPS.net approached ColoCrossing in mid-2009 as they began the initial phase of their product offerings. Their requirements were clear, high bandwidth and consistent throughput, proven reliability and flexible pricing to help their company get off the ground. Our 100% network uptime guarantee and commitment to utilizing only Cisco equipment we’re important factors during the decision making process.

ChicagoVPS.net had unique needs for their first dedicated server. We responded to the challenge by providing a custom built machine per their specifications. Because ColoCrossing relies on only name brand, industry leading hardware the customer was extremely impressed with the machine’s performance and resiliency under load. The high performance nature of the machine combined with our enterprise network helped ChicagoVPS.net deliver an exceptional product to their customers.

By leveraging ColoCrossing’s network and expertise, ChicagoVPS.net was able to continue adding customers and focus on providing excellent service without needing to worry about whether their infrastructure could keep up.

Learn how you can achieve the same success ChicagoVPS.net did by speaking to a ColoCrossing sales representative today.
